EDUCATION & QUALIFICATIONS

University of Toronto

Toronto, ON, Canada

HBSc in Computer Science; Arts and Science Internship Program; GPA: 3.95/4.00

Sept 2021 - Mar 2026

- **Relevant Coursework:** Introduction to Software Engineering, Software Design, Software Tools & Systems Programming, Programming on the Web, Introduction to Artificial Intelligence, Introduction to Machine Learning
- **Honors & Awards:** 2023 & 2024 Dean's List Scholar, Chancellor's Scholarship for High Academic Achievement
- **Languages & Technologies:** Python, Java, C++, JavaScript, HTML/CSS, SQL, PyTorch, Git, Django, React

EXPERIENCE

Meta

Bellevue, WA, United States

Software Engineer

Apr 2026 - Present

- Working on Delos: the distributed storage infrastructure powering Meta's AI & cloud services at scale

University of Toronto

Toronto, ON, Canada

Teaching Assistant

Sept 2025 - Dec 2025

- Led weekly software development labs; graded midterms, exams, and projects for CSC207 (Software Design)

Meta

Bellevue, WA, United States

Software Engineer Intern

May 2025 - Aug 2025

- Worked on the AI Infra team, using **PyTorch** to optimize model processing for Instagram & Ads
- Built a multi-stage validation component to close a critical gap in the model processing pipeline, preventing major site-wide outages which affected ML engineers across many teams
- Created CLI tools for ad-hoc weight validation of published model snapshots
- Implemented distributed chunk processing for weight pruning, decreasing peak memory usage by **14%**

Veeva Systems

Toronto, ON, Canada

Software Engineer Intern

May 2024 - Apr 2025

- Led development of **Java** internal debugging tool allowing for secure API calls in customer instances
- Optimized aggregation calls & added multivalue fields, reducing user table load times by **~0.2 seconds**
- Created new DB tables, service & API for a new revision history feature for medical data processing tasks
- Wrote **Groovy** scripts for Pfizer & Bayer to convert medical data to match regional standards

University of Toronto

Toronto, ON, Canada

Student Researcher

May 2024 - Aug 2024

- Wrote & presented research on applying 1st order logic to create **explainable AI** in generative design
- Converted natural language to generative design models via 1st order ontologies, designed using a workflow that incorporates the Fusion 360 API and a custom fine-tuned LLM

Careem

Dubai, UAE

Data Engineer Intern

Jun 2023 - Aug 2023

- Designed a dynamic resource routing model for **PrestoSQL** queries boosting performance by **~10%**
- Conducted data visualization & created **Grafana** performance dashboards for the query engine
- Developed features & wrote **JUnit/Mockito** tests for the migration from PrestoSQL to Trino

PROJECTS

DebrisMine - Environment-focused Social Media App for non-profit Oceanic Impact:

- Worked with **7** developers to build groups, posting & comments in **React Native** with **Django MVC** & **selenium**

PetPal - Pet Adoption Website:

- Led a team of **4** to build a **React** & **Django** pet adoption site with user profiles, adoption listings & pet info pages

Clinic Management Application:

- Spearheaded database & controller development (**MVC**) in a team of **8** building a **Java** clinic management app
